

Use the Care Plus® Venimex to remove the poison after being bit or stung by an insect or arthropod. This helps prevent the spread of the poison in the body. The venom extractor is effective for bites and stings from wasps, bees, spiders, and scorpions. The automatic vacuum pump has strong suction strength (800 millibar) and is easy to use with one hand. The mouthpieces can be used in three different ways.

Place the Care Plus® Venimex on the bite or sting and push down firmly until the pump latches onto the skin. Have the automatic vacuum pump suction for one to five minutes. The Care Plus® Venimex is suitable for all ages. It is a first aid treatment to be given while waiting for medical care in serious cases.

IN SHORT
